

 Affinitē™ ProviderLink™**Coordinating the Alignment
of Payers and Providers**

Seamlessly communicate care gaps, accelerate HEDIS® compliance, and make HCC risk adjustment more efficient

Improving member care requires a different level of coordination and alignment between health plans and providers. Historical approaches to managing care through legacy infrastructures and siloed environments created unnecessary barriers between plans and providers making it very difficult to work in unison. Plans and providers must overcome these limitations by coordinating their efforts to improve quality and lower costs. This is achieved when providers and payers develop a mutually beneficial program supported by a technology solution capable of facilitating transparent, timely communication for every care continuum stakeholder.

Affinitē™ ProviderLink Gives You The Power To Engage and Align Providers With Plan Goals

Affinitē™ ProviderLink enables payers and providers to excel in the new era of health care with one source of truth powerful enough to align them both for the best possible member outcomes. This cloud-based, near real-time solution empowers your health plan's providers with a prioritized list of patient care gaps complemented by recommended next-step interventions that align with HEDIS® score improvement targets while attaining HCC risk management thresholds. Traditional multi-touch care and quality management communications are streamlined, which helps in maintaining long-term positive relationships with every provider in your network.

*“Working with
Vital Data
Technology has
improved our
capability to
communicate
targeted care gap
interventions to
physicians. This
is beneficial to
our members and
physicians.”*

Chief Executive Officer
Driscoll Health Plan**

Features and Benefits of Cloud-Based, Coordinated Alignment of Payers and Providers

Health Plan Goals

Health plans can easily align providers with quality improvement goals for strategic HEDIS® measures. Affinite™ ProviderLink uses artificial intelligence and advanced analytics to identify, stratify and prioritize members and their care gaps.

Provider and Patient Alignment

The provider web portal shows the real-time, prioritized list of patients and interventions required for HEDIS® compliance or plan-defined metrics.

Improve Member Compliance

Providers can set reminders, see care notes, lookup medical records, view all encounters and emergency department visits and provide medical records to the health plan for review.

Provider and Health Plan Collaboration

Affinite™ ProviderLink speeds the path to member compliance by aggregating all interventions needed at the time of service. This helps members stay on track with their health, reduces abrasion, and accelerates HEDIS® medical record review compliance.

RIGHT INFORMATION. RIGHT PEOPLE. RIGHT TIME.™
